Blindern, 2024-08-07

Concerning approaching Ph.D.-disputation,

'Computational Approaches to Exploring Transcription Factor-DNA Interactions: From Resource Development to Co-binding Prediction'

The Faculty of Mathematics and Natural Sciences has appointed the following committee to evaluate your thesis and the subsequent disputation:

- Head Scientist Bruno Contreras Moreira, Estacion Experimental de Aula Dei, Consejo Superior de Investigaciones Cientificas
- Prof. Anagha Madhusudan Joshi-Michael, Department of Clinical Science, University of Bergen
- Prof. Trine B. Rounge, Centre for Bioinformatics, University of Oslo (administrator)

Head Scientist Bruno Contreras Moreira and Prof. Anagha Madhusudan Joshi-Michael will function as opponents, while Prof. Trine Ballestad Rounge will act as administrator. You are not to have contact directly with the committee.

Press release and photo

The following information has to be sent to the department by **3 September 2024**:

1. Send a photo for the announcement in the media (minimum 517*690 px) to disputaser@ibv.uio.no
2. Press release: <https://nettskjema.no/a/153312>

Visit the following page to look at previous submitted press releases and pictures:
<https://www.mn.uio.no/ibv/english/research/news-and-events/events/disputations/>

Printed copies of thesis

The deadline for sending your thesis to print is **4 weeks** before the disputation date. The department should then receive the copies of the thesis at least **10 working days (2 weeks)** before the disputation.

The trial lecture

The Department will send you the title for your trial lecture **10 working days (2 weeks)** before the defense, and simultaneously announce this and the disputation as an event on the UiO website. The objective of the trial lecture is to test the candidate's scientific maturity and test the ability to make use of the material within the time provided. The lecture should be designed so that it can be followed by an audience with a level of knowledge expected of advanced students in the field (at least one year of studies in the field). The lecture should last 45 minutes. If the committee plans to initiate questions after the trial lecture this should be clarified with the administration in advance.

Disputation

The academic head of department is appointed by the Dean of the Faculty to chair the public defense. If the academic head of department is unable to preside the disputation, the deputy academic head of department or a senior scientist at the department may be given the authority to do so. The candidate's

supervisor or the administrator of the committee cannot preside the disputation. Two of the committee members act as opponents.

The chairperson opens the disputation with a short introduction of the candidate, a short account of the submission and evaluation of the dissertation, and of the trial lecture and the evaluation of this. The candidate subsequently explains the objectives and results of her/his scientific research. The candidate's account should not last longer than 30 minutes.

When the doctoral candidate's account is finished, the first opponent places the candidate's work within an international and scientific framework. This should last for a maximum of 10 minutes. The discussion subsequently opens and the doctoral candidate has the opportunity to defend the thesis.

After the opponents have ended their opposition, the person presiding over the proceedings announces to the other persons who are present that any person who wishes to speak as an opponent *ex auditoria* may do so.

Finally, the candidate may express her/his thanks before the chairperson proclaims the disputation as closed.

After the disputation has ended, the person presiding over the proceedings has the opportunity on behalf of the adjudication committee, after it has had a short meeting, to inform about the committee's evaluation of the disputation.

After the public defense, the adjudication committee should send a report (using a specific form) to the Faculty, in which it describes the dissertation and the evaluation of the defense of the dissertation. The report's conclusion should indicate whether the public defense is recommended approved or not. The member of the committee without affiliation to a Norwegian institution gives a statement comparing the scientific level of the candidate's thesis with the general scientific level of the theses at the member's home institution.

The Faculty finally approves whether the disputation is passed based on the report of the committee.

Sincerely,

Joakim Erma Møller
