

Co-author declaration for the following joint paper:

This declaration should describe the research contribution of the candidate, the main supervisor (where he/she is an associate author) and the other two most central authors (the corresponding author must be among them). If applicable, the contributions from other PhD candidates who have or intend to include the paper in a thesis should be described. Contributions from master students should be described.

Authors: *Jaime A. Castro-Mondragon, Rafael Riudavets-Puig, Ieva Rauluseviciute, Roza Berhanu Lemma, Laura Turchi, Romain Blanc-Mathieu, Jeremy Lucas, Paul Boddie, Aziz Khan, Nicolás Manosalva Pérez, Oriol Fornes, Tiffany Y. Leung, Alejandro Aguirre, Fayrouz Hammal, Daniel Schmelter, Damir Baranasic, Benoit Ballester, Albin Sandelin, Boris Lenhard, Klaas Vandepoele, Wyeth W. Wasserman, François Parcy and Anthony Mathelier*

Title: *JASPAR 2022: the 9th release of the open-access database of transcription factor binding profiles*

Journal: *Nucleic Acids Research*

Ieva Rauluseviciute's independent contribution:

Co-first author, PhD candidate

Experimental and computational TF-DNA interaction data mining from CIS-BP repository and literature. Processing of this data. Manual curation of the motifs: selecting good quality motifs, searching literature and databases for information and creating the tables with manual curation results. Revising the metadata associated with curated and already existing motifs. Processing of plant data sets and coordination of their curation with collaborators in France. Updating and developing the motif discovery pipeline to obtain candidate motifs for manual curation by incorporating code that summarizes discovered motifs. Computing curated motifs clusters, revising them to check for the motif and metadata quality. Updating the JASPAR website content by providing the revised motif metadata, writing documentation about the database, including more frequently asked questions. Computing the database update summary table. Writing the manuscript sections about the database update, clusters, conclusions and perspectives. Revising the entire manuscript. Management of and overseeing the whole project.

Jaime A. Castro-Mondragon

Co-first author

Experimental and computational TF-DNA interaction data mining from GEO and ReMap repositories. Data processing. Manual curation of the motifs: revising the quality of motifs, searching databases for similar motifs, searching literature for orthogonal support. Development of the motif discovery pipeline to obtain candidate motifs for manual curation. Computation of matrix clusters and radial trees presented in the website. Writing the manuscript introduction and revising other sections.

Rafael Riudavets-Puig

Co-first author

Experimental and computational TF-DNA interaction data mining from GEO and GTRD repositories and literature. Data processing. Manual curation of the motifs: searching databases for transcription factor annotation, literature for motif-related information. Update of the motif discovery pipeline to make it more efficient. Computation of transcription factor flexible models, familial binding profiles, genome browser tracks. Update of the JASPAR website content by uploading the data. Writing the manuscript sections about familial binding profiles, enrichment analysis.

Anthony Mathelier

Main supervisor, Corresponding author

Supervision and project management. Coordination with international collaborators. Writing the manuscript.

Has this paper been, or will this paper be part of another doctoral degree thesis?

Yes: ☒ No:

If yes, elaborate: this article was included in Rafael Riudavets-Puig's doctoral thesis, who is a co-first author of this publication.

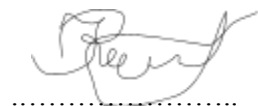

Contributions from master students: None

Do you verify that **Ieva Rauluseviciute** has contributed to this joint paper as described above?

Yes: ☒ No:

If no, specify:

Co-author's signatures:

Ieva Rauluseviciute

Jaime A. Castro-Mondragon

Rafael Riudavets-Puig
